

## WM LIGHT PLUS

The WM Light Plus loading ramp is constructed from reinforced aluminium making it lightweight and very easy to use due to its spring assisted system. The built in swivel feature allows the ramp to pivot externally at 90 degrees giving the operator full access to the rear of the vehicle when required. The WM Light Plus is available in widths from 40 cm to 120 cm; and a range of lengths between 150 cm and 325cm. Loading capacities of 600 kg are available for ramps with widths from 40 cm to 95 cm. Ramp widths from 100 cm to 120 cm have a loading capacity of 400 Kg. An internal swivel kit is available as an option, but must be requested on order. The anti-slip surface provides a safe loading platform with raised lateral anti-fall edges increasing load safety. Movable contact flaps situated at the top and bottom of the ramp provide a smooth transition on to the ramp and in to the vehicle.
